## **ACKNOWLEDGEMENTS**

The Ministry of Primary and Secondary Education wishes to acknowledge the following for their valued contribution in the production of the syllabus:

- The Junior Syllabus Development Panel
- Primary School Teachers
- Representatives of Teachers, Teachers' Colleges and Universities
- The Zimbabwe School Examinations Council (ZIMSEC)
- United Nations Children's Fund (UNICEF)
- United Nations Educational Scientific and Cultural Organisation (UNESCO)

## **1.0. Preamble**

### **1.1. Introduction**

The Heritage Based Junior Science and Technology Syllabus is designed to build upon the foundational concepts established in the Infant phase. The syllabus is hinged on the rich cultural heritage of our community and focuses to stimulate interest, imagination and critical thinking. Science and Technology Syllabus discovers the wonders of our natural world from plants and animals to materials and machines. Traditional scientific knowledge and modern innovations are used to connect scientific concepts to everyday lives and global challenges through hands-on activities. By integrating the Science and Technology Syllabus with cultural relevance, learners are empowered to investigate, innovate, solve problems and become informed responsible citizens who appreciate our heritage and promote sustainable development. The learners will be assessed through continuous school-based and summative assessment system in the form of project-based assessments and hands-on experiences and demonstrations.

### **Rationale**

The Heritage-Based Science and Technology Syllabus for Junior Education provides an integration of traditional knowledge and contemporary technologies. Learners will develop essential critical thinking, problem-solving and collaborative skills through hands-on inquiry based learning to apply scientific principles to real world challenges and impact the society positively. The syllabus addresses diverse learning needs and promotes equity by incorporating local perspectives and knowledge. It fosters responsible stewardship of natural resources and cultural heritage.

### **Aims**

The Heritage-Based Junior Science and Technology Syllabus aims to:

- develop an understanding of basic scientific and indigenous knowledge concepts
- instil use of traditional technologies to solve day-to-day problems
- develop problem solving skills through hands-on experiences
- analyse scientific information
- cultivate curiosity and exploration
- appreciate innovative solutions
- develop environmental awareness and protection responsibility

## 1.4 Syllabus Objectives

The syllabus will enable learners to:

- demonstrate creativity and critical thinking
- demonstrate environmental awareness and protection stewardship
- analyse the need for co-existence of plants and animals in their natural environment
- describe some negative effects of fossil fuels to the environment and climate
- explain basic scientific concepts and principles
- apply Indigenous Knowledge Systems (IKS) to real world problems
- apply problem-solving skills using traditional and contemporary technologies
- construct artefacts using traditional and contemporary technologies
- contribute positively towards the maintenance of their immediate environment
- design innovative solutions using traditional and contemporary technologies

## 1.5 Assumptions

The Heritage-Based Junior Science and Technology Syllabus for Zimbabwe has taken deliberate consideration of several assumptions critical for socio-economic transformation. Our assumptions as a country are based on the context of Zimbabwe's heritage, educational system, societal needs and aspirations. It therefore becomes critical to consider that learners:

- have gone through the Infant Science and Technology Syllabus
- are actively engaged in scientific experiences
- live in diverse social contexts
- have access to and use technological devices
- are conscious of their environment
- are aware of their obligation towards health and well-being

The general assumption is that a Heritage-Based Junior Science and Technology Syllabus can effectively integrate science and technology education, fostering a deeper understanding of scientific concepts, technological innovations, and their relationship with Zimbabwe's heritage.

## **1.6 Cross-Cutting Themes**

The following cross-cutting themes must be considered in the Junior Science and Technology teaching and learning to foster competence development for life-long learning:

- Inclusivity
- Cultural diversity
- Ethical innovation
- Community engagement
- Climate change
- Digital competencies
- Health and Safety
- Disaster risk management
- Entrepreneurship

## **1.7 Summary of Content**

The Junior Science and Technology Syllabus emphasises integrating heritage-based knowledge into Junior education and supports diversity. The syllabus covers various topics aimed at fostering a deep connection with cultural roots while promoting scientific curiosity and technological skills. Key topics include health and hygiene practices, food and nutrition, environmental awareness and conservation, and educational technology. It encourages hands-on, learner-centred activities such as moulding, classifying, constructing, drawing, designing, programming, promoting critical thinking and problem-solving skills. The syllabus also addresses cross-cutting themes like digital competencies, climate change, and disaster risk management, ensuring a holistic approach to junior development. Continuous assessment is performance based, projects, presentations and observations to evaluate the understanding of both the scientific and cultural aspects of the learning area.

## 1.8 Methodology

This syllabus is based upon a learner-centred participatory approach with emphasis on hands-on, multisensory, problem identification and problem solving. These attributes encourage sharing, spark curiosity and promote logical and practical learning. Learner-centred approach encourages learner to learner exchange of scientific ideas, experiences, knowledge, skills and attitudes. Innovativeness and inventiveness are strongly recommended in the teaching and learning of Science and Technology. The following are the suggested methods:

- educational tour
- discovery
- experimentation
- demonstration
- resource person
- science and technical exhibition
- simulation
- case study
- project work
- research
- game
- quiz
- gallery walk
- debate
- nature-based learning
- project
- field trip/ excursion

## 1.9 Time Allocation

Ten 30 minute periods per week (5 hours), should be allocated for adequate coverage of concepts.

## **2.0 Syllabus Presentation**

This syllabus is made up of eight (8) topics.

### **2.1 SYLLABUS TOPICS**

The Science and Technology Heritage-Based Syllabus has the following topics:

- 2.1.1 Health and Hygiene practices
- 2.1.2 Food and Nutrition
- 2.1.3 Crops, Plants and Animals
- 2.1.4 Environmental Awareness and Conservation
- 2.1.5 Tools, Equipment and Implements
- 2.1.6 Energy and Fuels
- 2.1.7 Disaster Risk Management and Resilience
- 2.1.8 Educational Technology and Innovations

### 13.0 ASSESSMENT

Science and Technology learning area at Junior level shall be assessed through School Based Continuous Assessment (SBCA) and Summative Assessment (SA). These assessments shall be guided by the principles of inclusivity, practicability, authenticity, transparency,

flexibility, validity and reliability. The principles are crucial for creating a supportive and effective learning environment that fosters growth and development in learners at junior level. In addition to SBCA and SA those aspects that cannot be assessed through the continuous and summative modes will be assessed through learner profiling. The aspect to be profiled involves soft skills. Arrangements, accommodations and modifications must be visible to enable candidates with special needs to access assessments. This section covers the assessment objectives, the assessment model, the scheme of assessment, and the specifications for continuous assessment.

### **13.1 ASSESSMENT OBJECTIVES**

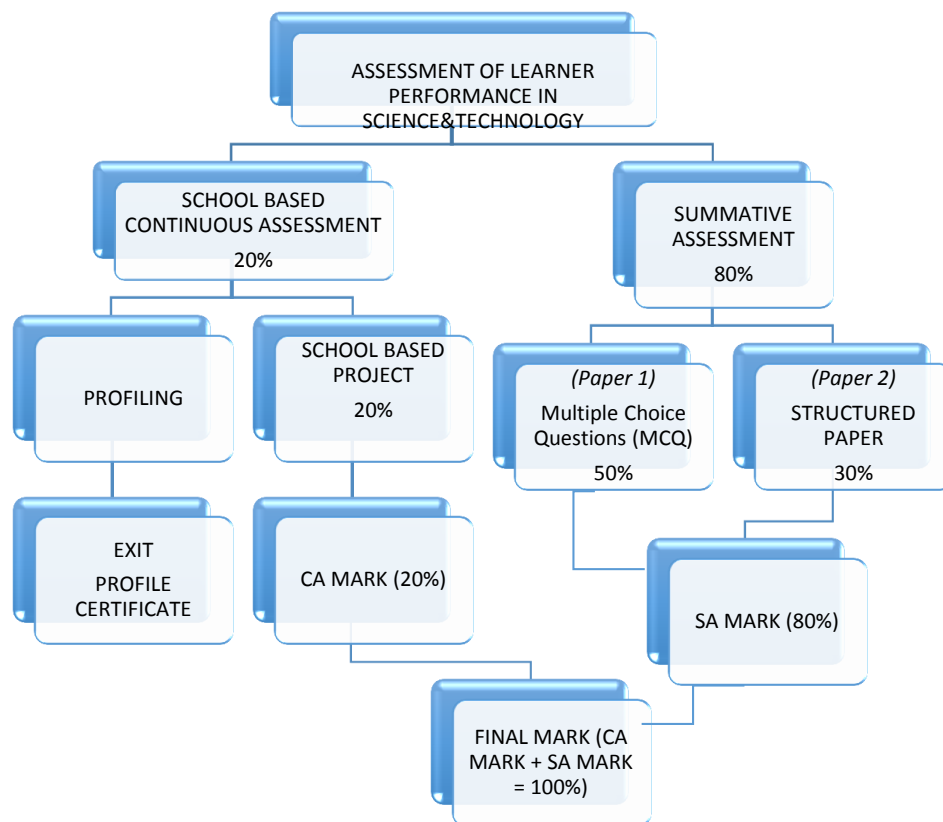

Pupils will be assessed on their ability to:

- 13.1.1** demonstrate an understanding of scientific and technological concepts.
- 13.1.2** apply indigenous knowledge systems, scientific and technological concepts to solve real life problems
- 13.1.3** analyse scientific and technological concepts
- 13.1.4** describe integration of heritage-based knowledge with scientific and technological education.
- 13.1.5** evaluate hands-on skills through practical activities that encourage exploration, experimentation, and creativity.
- 13.1.6** use different forms of data presentation methods to give scientific explanation to a phenomena
- 13.1.7** demonstrate knowledge of scientific instruments and apparatus including techniques of operations
- 13.1.8** communicate scientific and technological information logically and effectively.

### **13.2ASSESSMENT MODEL**

The assessment of learners in Science and Technology at Junior School module will follow both Continuous and Summative assessment. Continuous Assessment will include recorded activities from the School Based Project done by the learners while summative will include terminal examinations.

### ASSESSMENT MODEL AT JUNIOR LEVEL

#### 13.3 Scheme of Assessment

Learners at Junior School module will be assessed using both School Based Continuous Assessment and Summative Assessment. From grade 3 to 6, learners will do a school-based project per grade, per year and per learning area which will

contribute 20% to the end of term and year mark. Public examination candidates at Junior School module are expected to complete 2 school-based projects per learning area at grade 6 and grade 7 level, which will contribute 20% to the final mark at Grade 7.

FORM OF ASSESSMENT	WEIGHTING
School Based Continuous Assessment	20%
Summative Assessment	80%
<b>Total</b>	<b>100%</b>

#### 13.4 School – Based Project: Continuous Assessment Scheme

	Project Stage	Completion Date by end of each stated month below:	Marks	Project Mark Weight
Project Execution Stages from Grade 3-6				
<b>1</b>	Problem Identification and its context	January-February	5	
<b>2</b>	Possible methods of solving the problem	February-March	10	
<b>3</b>	Selecting the most suitable method	March-April	5	
<b>4</b>	Development of Ideas	May-July	15	
<b>5</b>	Presentation of Results	July-September	10	
<b>6</b>	Evaluation and Recommendations	October	5	
	<b>TOTAL</b>		<b>50</b>	<b>10%</b>
Project Two at Grade 7				
<b>1</b>	Problem Identification and its context	January-February	5	
<b>2</b>	Possible methods of solving the problem	February-March	10	
<b>3</b>	Selecting the most suitable method	March-April	5	
<b>4</b>	Development of Ideas	May-June	15	
<b>5</b>	Presentation of Results	June-July	10	

<b>6</b>	Evaluation and Recommendations	July-September	5	
	<b>Total</b>		<b>50</b>	<b>10%</b>
<b>Grand Total</b>			<b>100</b>	<b>20 %</b>

#### Summative Assessment: 80%

Paper	Description	Duration	Marks	Paper Weighting %	Weighting %
<b>1</b>	40 Multiple Choice Questions	1 hour 30 minutes	40	50	80
<b>2</b>	Structured Questions	1 hour 30 minutes	50	30	

#### Paper 1

There are 40 multiple Choice Questions and Candidates are expected to answer all questions. The total marks for this component is 40 marks.

#### Paper 2

This component comprises sections **A** and **B**.

**Section A** shall consist of 15 compulsory structured questions. Candidates must answer all questions. The total for this section is 30 marks.

**Section B** shall consist of 6 semi-structured questions worth 5 marks each. Candidates must choose and answer 4 questions. The total for this section is 20 marks.

#### Skills Weighting

	Skill	Weight %
<b>1</b>	Knowledge and comprehension	50
<b>2</b>	Application	30
<b>3</b>	Analysis, evaluation and creativity	20
